

2023 v1.

New product.....Aluminium joists and pedestals. **“Capri”**

Aluminium Joists and pedestals can be used with all our composite decking.

The list below are the products required in the assembly of your frame.

The same decking centres apply for Aluminium 350mm for domestic and 250-300mm for commercial.

The frame should also have double head joists, all head joints on your deck boards must have four clips.

Again with all our products we recommend that these products are fitted by a professional installer who is familiar with the workings of these products.

Based on 350mm centres you require the following:

1. 40862 – 40865 Pedestals...7 required per M2
2. 40866 - Pedestal... extension piece 100mm
3. 40867 - Capri joist alignment connectors...14 per m2 sold by the box (50pc)
4. 61835 Self cutting screw for joist alignment connector (100 per bag) 3m2 per bag
5. 40860 Alum Joists...3 linear meters per M2
6. 40861 Alum joist connector's 200mm...half the number of connectors to total amount of joists.
7. 40803 Metal clips (FOR BOTH 3D AND CAPRI 120mm COMPOSITE DECKING)

Metal Clips should always be used with Composite Decking and Aluminium Joists

All fitting instructions for composite decking apply.....350mm centres, double joists, start end clips etc.

Pedestal should be fixed to a solid base.....Mechanically or with foam/glue
