Quality

our product

The choice of door handle gives an indication of the taste of the person living in that house.

Small details, like the shape or material are enough to show your personality.

Choosing specific door handles is often not an easy choice, which is why we at fortessa™ have carefully brought together this selection of ranges to suit all tastes.

Our complete package includes quality Italian design. These global designs are brought to life by highly skilled craftsmen and engineers. Fortessa™ handles are finished by hand to give you a unique creation every time.

production

The materials used on fortessa™ handles, whether brass, chrome or stainless-steel are all tested to European Standard EN 1906.

Our products undergo pre-treatments and are coated with special resins, to give a very high resistance to weather conditions, shocks and abrasion and maintain their natural shine.

**Style is not easy to define,
but you know it when you
see it.**

testing & inspection

All fortessa™ products undergo thorough testing at all stages of manufacture.

Our handles undergo stringent tests for strength, stability and mechanical performance.

All fortessa™ handles must comply to strict quality examinations.

Individually hand-finished, each item is unique, and our entire range is tested to European Standard EN 1906

The protective surface layer of each handle has been checked for its resistance to corrosion.

Each handle is assessed for its scratch-resistance quality.

Performance of all working parts is rigorously tested.

And finally, before dispatch, all batches are carefully checked by eye to ensure they are perfect.
